It currently consists of 1 contigs. Gaps between the contigs are represented as tuns of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This record contains 87 individual sequencing reads that have not been assembled into configs. Runs of N are used to separate the reads and the read in which they appear is completely arbitrary. Low pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
* the accession number will be preserved.

NOTE: This is a "working draft" sequence. It currently consists of 65 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                       Direct Submission

```
The present sequence represents a probe for the wild type allele of a human norepinephrine transporter gene. The specification a method for susceptibility to sub-optimal norepinephrine transport in a subject. The method comprises obtaining a biological sample from the subject and detecting a polymorphism of a norepinephrine transporter gene in the sample from the subject, the presence of the polymorphism norepinephrine transport. The method is useful for screening for susceptibility of the subject to sub-optimal norepinephrine transport. The method is useful for screening for susceptibility of subject to rethostatic intolerance. Norepinephrine transporter genes are useful for gene therapy for modulating norepinephrine transport in a target cell and treating susceptibility to impaired norepinephrine transporter function, orthostatic intolerance or other relevant diseases in humans and animals such as mental illness, hypertension, heart disease, psycho stimulant abuse e.g. cocaine or
                                                                                                              Screening for susceptibility to sub-optimal norepinephrine transport, particularly orthostatic intolerance in a subject by detecting a polymorphism of norepinephrine transporter gene

                                                     The present invention relates to biallelic markers derived from human genes involved in central nervous system (CNS) disorders. The present sequence is one such biallelic marker derived from human norepinephrine transporter (NET) gene. This marker has a single nucleotide polymorphism (SNP) and is useful in determining the genetic predisposition of individuals to CNS disorders, by identifying the nucleotides at a set of genetic markers in a biological sample, where the markers comprise at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to biallelic markers derived from human genes involved in central nervous system (CNS) disorders. The present sequence is one such biallelic marker derived from human norepinephrine transporter (NET) gene. This marker has a single nucleotide polymorphism (SNP) and is useful in determining the genetic predisposition of individuals to CNS disorders, by identifying the nucleotides at a set of genetic markers in a biological sample, where the markers comprise at least one CNS disorder related marker.
                                                                                                                                                                                                                                                                                                                                                                                                                  Single nucleotide polymorphism; SNP; biallelic marker; human; ds; central nervous system disorder; CNS; NET; norepinephrine transporter.

The specification a method for screening for susceptibility to sub-optimal norepinephrine (NE) transport in a subject. The method comprises obtaining a biological sample from the subject and detecting a polymorphism of a norepinephrine transporter gene in the sample from the subject, the presence of the polymorphism indicating the susceptibility of the subject to sub-optimal norepinephrine transport. The method is useful for screening for susceptibility of a subject to cuthostatic intolerance. Norepinephrine transport in a target cell and treating susceptibility

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapphing, and in recombinant production of (II). The and gene mapphing, and in recombinant production of (II). The polymerlectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques or restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and and and active and or produce other types of the invention.

Cuanno acid sequences. Ask64197-Ask94664 represent novel human diagnostic coding sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a human norepinephrine transporter. The specification a method for screening for susceptibility to sub-optimal norepinephrine (NE) transport in a subject. The method comprises obtaining a biological sample from the subject and detecting a polymorphism of a norepinephrine transporter gene in the sample from the subject, the presence of the polymorphism indicating the susceptibility of the subject to sub-optimal norepinephrine transport. The method is useful for screening for susceptibility of a subject to orthostatic intolerance. Norepinephrine transporter genes are useful for gene therapy for modulating norepinephrine transport in a target coll and treating susceptibility to impaired norepinephrine transporter function, orthostatic intolerance or other relevant diseases in humans and animals such as mental illness, hypertension, heart disease, psycho
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Norepinephrine transporter; orthostatic intolerance; gene therapy; mental illness; hypertension; heart disease; stimulant abuse; cocaine; amphetamine abuse; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Screening for susceptibility to sub-optimal norepinephrine transport, particularly orthostatic intolerance in a subject by detecting a polymorphism of norepinephrine transporter gene

Pools of clones from a human SK-N-SH cell (a human neuroblastoma cell line) cDNA library were transfected into COS-1 cells. The transfected clones were in the form of expression vectors (pXM) having an SV-40 replication origin to enable amplification.

Transfectants of these cells expressing the norepinepherine transporter were identified by employing an assay exploiting the fact that the norepinepherine analogue m-iodobersylguanidine (m-IBG) is accumulated intracellularly by SK-N-SH cells expressing the intact NT. The accumulated radiolabelled m-IBG allows direct autoradiographic visualisation of transporter expressing the intact NT. The accumulated radiolabelled m-IBG allows direct autoradiographic visualisation of transporter expressing the colone was obtd. Transfected from positive colonies and the resulting plasmid pools rescreened and subdivided until a single clone was obtd. Transfected cells become capable of norepinepherine uptake, which may be inhibited by various drugs, e.g. cocaine, to a degree similar to the effect of such drugs on noradrenergic neurons. The cloned cDNA makes possible well-controlled studies of neurotransmitter transporter function in non-neuronal cells same cell. Such studies include the relative effects of various
                                                                                                                                                                                                                                                                  NT; noradrenaline; neuroblastoma; neutotransmitter; antidepressant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Complementary DNA clone encoding human norepinephrine transporter protein - isolated from human neuroblastoma cells and useful for determining action of e.g. antidepressant drugs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100.0%; Score 15; DB 13; Length 1983; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence encodes a human norepinephrine transporter. The specification a method for screening for susceptibility to sub-optimal norepinephrine (NE) transport in a subject. The method comprises obtaining a biological sample from the subject and detecting a polymorphism of a norepinephrine transporter gene in the sample from the subject, the presence of the polymorphism indicating the susceptibility of the subject to sub-optimal norepinephrine transport. The method is useful for screening for susceptibility of a subject to orthostatic intolerance. Norepinephrine transporter genes are useful for gene therapy for modulating norepinephrine transport in a target cell and treating susceptibility to impaired norepinephrine transporter function, orthostatic intolerance or other relevant diseases in humans and animals such as mental illness, hypertension, heart disease, psycho
                                                                                                                                                                                                                                                                                                                                                         Norepinephrine transporter; orthostatic intolerance; gene therapy; mental illness; hypertension; heart disease; stimulant abuse; cocaine; amphetamine abuse; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Screening for susceptibility to sub-optimal norepinephrine transport, particularly orthostatic intolerance in a subject by detecting a polymorphism of norepinephrine transporter gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by CGA, by detecting the level of expression of gene(s) (GS) identified by the expression level to an expression level in an unactivated CC the expression level to an expression of GS is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent of that alters the expression of at least one gene in GS; (2) screening (M3) (M3) included are modulating (M2) GA by contacting GC with an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation of the gene is indicative of inflammation, or sterile inflammation with an agent that modulates the expression of gene(s) from GS. MA is useful for modulating GA; M3 is useful for screening an apple of modulating CGA preferably in an inflammation in a tissue; M4 is useful for exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic creening an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic or response in a subject, exposure of a subject to a pathogen or sterile ential man
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, parasitic infection, protozoal infection, fungal infection and M5 is useful for treating one of the above conditions. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to biallelic markers derived from human genes involved in central nervous system (CNS) disorders (see AAH88161-AAH88702). The markers have a single nucleotide polymorphism (SNP) and are useful in determining the genetic predisposition of individuals to CNS disorders, by identifying the nucleotides at a set genetic markers in a biological sample, where the markers comprise at least one CNS disorder related marker. The present sequence was used to illustrate the invention.
                                                                                                                                                             Gaps
sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated polynucleotides, useful for genotyping nucleic acids for biallelic markers for the diagnosis of depression, comprises central nervous system disorder related biallelic marker -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 160755 BP; 43057 A; 36601 C; 38189 G; 42727 T; 181 other;

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABN15762 to ABN27552 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder. In humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polynucleotide syndrome associated with ORFX-associated disorders. ORFX polynucleotide creatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious attritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also
                                                                                                                                                                                                                 hyperproliferative disorder; psoriasis; benign tumour; haemorrhage, degenerative disorder; osteoarthritis; neurodegenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascoular disease, diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune deficiency; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      reperfusion injury in various tissues and conditions resulting from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative,

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABD54131-ABD56305), and also encompasses polypeptides 90% identical and polyproclectides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynuclectides, antibodies against human ovarian antigens, and the use of ovarian antigen polynuclectides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast cancer, and disorders. Such conditions include ovarian cancer and breast cancer, and catainstic tumours of ovarian or breast origin, reproductive system clisorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vaginitis), immune disorders (e.g., anaemia), cardiovascular disorders, increlated disorders (e.g., anaemia), cardiovascular disorders, respiratory disorders, neurological disorders, autoimmune ophoritis, systemic lupus erythematosus), respiratory disorders, neurological disorders, anaemia), cardiovascular disorders, respiratory disorders, neurological disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and polypeptides and polypeptides may also be used in screening for compounds which

                                                                                            ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention siscloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The 20.5 gene, also referred to as Tea, identifies transcripts found in only a limited number of tissues. Tea transcripts are induced in splenocytes activated with the T cell mitogen ConA. Unlike other known genes expressed in activated T cells, the Tea gene appears to encode a protein which traverses the membrane multiple times, whereas the large number of known integral membrane protein which are induced in T cell activation are single membrane spanning proteins. GENERAL INFORMATION:

APPLICANT: MACLEGG Dr., Carol I.

TITLE OF INVENTION: No. 5440017el T-cell Lymphoma CDNA Clones
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSEE: Patent Department, Fulbright & Jaworski
STREET: 1301 McKinney, Suite 5100
CITY: Houston
STREET: PatentIn Release #1.0, Version #1.25
COMPUTER READABLE FORM:
MEDIUM TIPE: PatentIn Release #1.0, Version #1.25
COMPUTER: PatentIn Release #1.0, Version #1.25
COMPUTER: IBM PC compatible
OPERATION SYSTEM: US/08/002,999
FILING SYSTEM: 19930111
CLASSIFICATION NUMBER: US 07/686,322
FILING DATE: 11930111
ATTORNEY APPLICATION NUMBER: US 07/686,322
FILING DATE: 11395
FILING DATE: 11395
FILING DATE: 11395
TELEPHONE: (713) 651-534
TELETRY: Western Union 762829
INFORMATION FOR EQL ID NO: 5:
SEQUENCE CHARACTERISTICS:
LENGTH: 2397 base pairs
TYPE: NUCLEIC AND A LO MRNA
ORGENISM: MOUSE
CORGANISM: MOUSE
CORGANISM: MOUSE
CORGANISM: MOUSE
CORGANISM: MOUSE

Patent No. 6428998
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Colige, Alain
APPLICANT: Lapiere, Charles M.
APPLICANT: Prockop, Darwin J.
TITLE OF INVENTION: RECOMBINANT N-PROTEINASE,
TITLE OF INVENTION: AND THE PRODUCTION, METHODS AND USES THEREOF
NUMBER OF SEQUENCES: 17
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pennie & Edmonds, LLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                        GENERAL INFORMATION:
APPLICANT: Lee, Margie
APPLICANT: Sanchez, Susan
APPLICANT: Henk, Adam
TITLE OF INVENTION: Pasteurella Neuraminidase Coding Sequences,
TITLE OF INVENTION: Compositions and Diagnostic Methods
FILE REFERENCE: 77-968
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 2001;

Application US/09430029
Sequence 1. Application US/09430029
Patent No. US20020168738A1
GENERAL INFORMATION:
TOTAL OF INVENTION:
TITLE OF INVENTION: DNA Fragment Carrying Toluene Monooxygenase Gene,
TITLE OF INVENTION: DNA Fragment Carrying Toluene Monooxygenase Gene,
TITLE OF INVENTION: Compounds and Aromatic Compounds, and
TITLE OF INVENTION: Method for Environmental Remediation
FILE REFERENCE: CF013982US
CURREMY PFLING DATE: 1999-10-29
EARLIER APPLICATION NUMBER: JP P1998-310801
EARLIER FILING DATE: 1998-10-30
NUMBER OF SEQ ID NOS: 13
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ó;

Library was constructed by Dr. Douglas Melton DNA sequencing by:
Washington University Genome Sequencing Center For information on
obtaining a clone please contact: Juliana Brown
(brown@fas.harvard.edu) This sequence now available from the IMAGE
consortium, for clone orders contact: info@image.llnl.gov
Seq primer: -40RP from Gibco
High quality sequence stop: 432.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Harvard University, Howard Hughes Medical Institute

```
amplified once on solid support and plasmid DNA from library was prepared. The library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806, 0.5 microgram single-stranded library plasmid DNA was mixed with 5 micrograms PCR product representing library inserts and hybridized to an Ecot of 20. Single-stranded (unhybridized) plasmids were isolated by hydroxyapatite chromatography and used to make this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 (bases 1 to 513)

/note="Organ: Pancreas; Vector: pSPORT1; Site_1: Not 1; Site_2: Sal 1; Starting library constructed using SuperScript Plasmid Library kit (Life Technologies). CDNA made by oligo-dT prining. Size selected by column fractionation; average insert size 1.08 kb. Library was amplified once on solid support and plasmid DNA from library was prepared. The library DNA was normalized by method #4 from Bonaldo, Lennon, and Soares 1996 Genome Research 6:791-806; 0.5 microgram single-stranded library plasmid DNA was mixed with 5 micrograms PCR product representing library inserts and hybridized to an Ecot of 20. Single-stranded (unhybridized) plasmids were isolated by hybrary.

/clone_lib="C. reinhardtii CC-1690, Stress II (normalized
), Lambda Zap II"
/note="Vector: pBluescript II SK'; Site_I: ECORI; Site_2:
/note="Vector: pBluescript II SK'; Site_I: ECORI; Site_2:
xhoI; Stress condition II library, constructed by John
Davies and Jeffrey McDermott, combines cDNAs from CC-1690
cells grown to mid-log phase in TAP (NH4+ - containing)
and shifted to TAP - NO3- (24hrs); H2 production
conditions (0, 12hr, 24hr) see Melis et al., (2000) Plant
Phys. 122: 127-135; TAP + H2C2 (1, 12, 24 hr).
PolyA mRNA was purified from each sample, pooled and cDNA
synthesized The cDNA was directionally cloned into lambda
zap II (Stratagene) in the EcoRI (5') and XhoRI (3')
sites: pBluescript II SK- plasmids were excised from the
lambda ZAP clones by superinfection with Exassist
(Stratagene) phage. The library was normalized using
method 4 described in Bonaldo et al., (1996) Genome
Research 6: 751-866.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              E 1 (bases 1 to 653)

RNA was isolated from mycellum of P. infestans DDR7602

cultured for 4 weeks in synthetic medium. EST clones were

named by their position in the microtiter plate, preceded

by the prefix MY (for mycellal) and the successive number

of the microtiter plate (e.g. MY 06-A-04)."

is the number of results predicted by chance to have a Pred. No.

Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.
1 (bases 1 to 920)
Chu, T., Blumenfeld, M. and Cohen, D.
Biallelic markers derived from genomic regions carrying genes involved in central nervous system disorders

REFERENCE AUTHORS TITLE

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
